

Amendments to the Specification

Page 8, between lines 3 and 4: Please insert the following paragraph:

As shown in Fig. 1, non-divisional electrode 1a and divisional electrode 2a both included in deposited electrodes 110 have substantially the same thickness, and non-divisional electrode 1b and divisional electrode 2ba both included in deposited electrodes 210 have substantially the same thickness.

Please replace the paragraph beginning at page 14, line 2, with the following rewritten paragraph:

The foregoing structure allows achieving an advantage and an effect similar to those obtained in the first embodiment, and yet, two unit-capacitors are coupled together in series similar to the fourth embodiment, and further, heat generation from lattice-like divisional electrodes ~~32b~~32a can be suppressed. As a result, a metallized-film capacitor working in a higher voltage environment and generating less heat is obtainable.
